Beyond Silicon: New Computing Paradigms

- 30 Introduction *Toshinori Munakata, Guest Editor*
- 35 Computing with a Trillion Crummy Components
Warren Robinett, Gregory S. Snider, Philip J. Kuekes, and R. Stanley Williams
- 40 Computation with Carbon Nanotube Devices *Jing Kong*
- 43 Molecular, Chemical, and Organic Computing *Robert Stadler*
- 46 Autonomous Programmable Biomolecular Devices Using Self-Assembled DNA Nanostructures *John H. Reif and Thomas H. LaBean*
- 55 Toward A World With Quantum Computers *Dave Bacon and Debbie Leung*
- 60 Optical Computing: Need and Challenge *Hossin Abdeldayem and Donald O. Frazier*
- 64 Micro/Nanofluidic Computing *David W.M. Marr and Toshinori Munakata*
- 69 Amoeba-based Neurocomputing with Chaotic Dynamics
Masashi Aono, Masahiko Hara, and Kazuyuki Aihara
