Example of Data Mining Process with Decision Tree
Using Microsoft Analysis Service

CIS 660 Data Mining
Data source view
After building the Targeted Mailing Scenario and Adding and Processing Models, I explored the Targeted Mailing Models, I chose to explore the Decision Tree Model and I got this result.
Another pictures for it.
Now I will drill through the node (Age >= 48 and < 64)
The Dependency Network:
The lift chart: we notice that the TM_Decision_Tree model provides the greatest lift, outperforming both the Clustering and Naive Bayes models.
The results of the prediction of the decision tree:
The first question is hand writing and I submit it hard copy with this question.
